

Jim's Rant – Family (Dealing only with family preparation for the 2022 chaos)

[Back to Rants page.](#)

Index-1 Grocery Shopping During Chaos.

During the social chaos, we all will have to venture outside to grocery shop at some time. You will need protection from those waiting in the parking lot.

By that time people will openly carry a displayed gun, and yes, without a permit. You will know when it is time. So **inventory a holster** now. Just wearing it will be a warning to leave you alone, even you women. Keep it in the dresser drawer until you are no longer embarrassed to wear it out. In the meantime, carry the gun in your purse.

Even if you don't have a gun get a toy one and spray paint it black. Now you are armed. Who's going to ask to see your gun purchase receipt to see if it's a real gun?

Next **purchase a whistle**, preferably a storm whistle. [\\$4 Each](#)

Replace the cords with camouflaged cord and spray paint the whistle brown. This way no one will notice the connection between you and your friend. As you shop your friend follows a distance behind you, also with a whistle. You must never look at him. If you are attacked he can blow the super loud whistle while holding a gun in the air, signaling "No No."

If you have to defend yourself as in the above scene, leave with the buggy pusher in front with the protector still a distance behind. No attacker will molest either of you after the whistle because they will be confused, especially if the buggy pusher also has a gun in hand now.

The whistle is preferred over firing two quick shots in the air as the follower will be hesitant to fire a shot in the air inside a store. Besides, why waste two shots?

The shopper can signal fear by blowing the whistle or lifting the left arm twice. Now lets go shopping. Also note that for the legally squeamish no laws were violated.

Have your car parked so you don't have to back up.

Index-2 Spot The Leaders For Group Survival.

We are all aware of what happened on the Titanic. It's in our culture. But what good is it if we don't learn anything personally from it? And again, I mean personally. If I were in a similar Group Survival situation what one skill would I wish I had if I could make a wish come true before such a survival event appeared in my life?

Would it be how to put on a life jacket? How to escape a burning building or start a fire in the snow? How to disguise your appearance in front of a jealous husband or wife looking for the culprit? My answer would be a universal answer.

To me the most important skill will be able to instantly spot the leaders to follow, support or work with. What I am talking about is to be to look at thirty strangers and instantly know the five to emulate and work with as most of the others may get you killed.

I have discovered in life our biggest problem is we expect all others to think like we do, to have our habits and personalities. We suffer let downs when because everyone else did not live up to our

expectations. This causes us to traverse life blind, stupid and hurt. If we educate ourselves life goes a lot smoother.

Early in my business life I matched two distinct personality spotting systems together such that if you see two strangers getting out of a Volkswagen you instantly know how each one thinks, makes decisions, gets on top and who has to sleep in the wet spot. This is the skill-set you need, no, not the wet spot part.

I taught seminars in Personalities in every new organization I was in to calm people down and make the happier and more productive. It always made a vast improvement in people's lives from what I could see.

See this one hour seminar [Spotting Personalities](#)

Then see this article on getting your survival plan ready instantly.

6. Having a Complete Plan in Just A Few Days.

In my early twenties I was tricked into becoming a Scout Master. I read the hand book and knew that the 15 year old boy leaders were to complete an annual plan for their troop. The first planning day I left them for two hours with the big blank calendar and soft drinks. When I returned it was half filled out and I was told of the "best farting contest ever!" The same thing happened the second year.

The third year I cheated! I filled out the plan 75% complete. However, being the stupid person I am, I made a lot of mistakes, such as swimming in December, Winter camping in June and grilling Brussels Sprouts on Saturday night. This time I returned to see a 100 percent great Annual Plan. What I learned is that for most people it is a whole lot easier to copy and alter than to create from scratch as it is now not so overwhelming.

That is what I suggest here. Select ONE person to cause it to happen, however he deems fit. It then is a plan that the group can mull over and change as the plan is being enacted. But you now have a group vision and starting plan! I am reminded of a plaque I once saw that said, "And God so loved the world that he sent his only begotten son, instead of a committee."

Who Should Plan It?

Every group has a "John Wayne" type person in it. He/she is the one the others lovingly refer to as an "Asshole". That person has a square face and chin; a square torso from the rear, square butt, short stubby square hands and fingers. They walk like a storm trooper and are serious all the time. One of the characteristics about them is they make decisions in three seconds and 99 percent of the time they are right.

There are four basic personalities. If you assign the task to anyone from the other three it will either take forever or the planning will never occur.

I put on a one hour YouTube seminar teaching this skill of recognizing when to follow others and when to lead them. We require all of our members to watch this before joining. This is because we get our feelings hurt when others do not act like us and this creates group problems. With the training most of this problem will go away, even in a new group of total strangers. If we activate the retreat we won't have time for personality problems and mistakes. You will know how to best utilize all of your members, so take the time to watch it. Then go get your Choleric to complete the Plan.

Index-3 Solving Your Biggest Problem First – Water.

During a societal chaos period, your most immediate problem is water if it is shut off. After three days without it you can no longer think clearly and are entering the dying phase of life. This will happen quicker and harder than any other problem you will face.

Preppers spend small fortunes on water filters, cisterns, life straws and a shed full of bottled water. You don't have to. All you need to do is invest from \$2 to \$10 and your water problem is under control so you can go on to the next biggest problem your family faces.

First lets Define The Problem. The average 4 person family uses 15,000 gallons of purified water per month. During survival each adult needs only 30 to 90 purified gallons per month for drinking and food preparation to survive. That is 1 to 3 gallons per day.

Water Sources. Absent water stored for survival your first source is the 50 gallon hot water heater. Don't forget to open a sink faucet to let air in as you empty from the bottom tank faucet. Next might be shower-lined bathtub with last minute water collection stored in it.

Now we are scavenging from creeks, standing water in gullies, drainage ditches and rainwater. Sounds yummy, doesn't it?

Water Purification Methods.

1) Boil it for three minutes. It is now purified but this requires a lot of energy.

2) Best Method Is To Use Bleach. It must be UNSCENTED. Cost for one gallon is \$2.

1. Use a clean dropper to add the bleach to your water. Make sure you have one in your [emergency supply kit!](#)

2. Choose the right amount of bleach. Here's a good guide to follow:

Volume Of Water	Amount of 6% bleach you should add to the water	Amount of 8.25% bleach you should add to the water
1 liter	2 drops	2 drops
1 gallon	8 drops	6 drops
2 gallons	16 drops	12 drops
4 gallons	1/3 teaspoon	1/4 teaspoon
8 gallons	2/3 teaspoon	1/2 teaspoon

3. Based on the above, you know now how much bleach to add to your water. However, you need to double the amount of bleach if the [water is cold](#), colored, or cloudy.

4. Once you've added the bleach to the water you wish to clean, stir it well and leave it aside for 30 minutes. Smell the water. It should smell a bit like chlorine. If it doesn't smell like chlorine, you should

repeat the same dosage as before and allow the water to stand for 15 more minutes before you drink it.
5. When you taste the water, if it tastes strongly of chlorine, pour the water from one [clean container](#) into another. Let it rest for a few hours before you drink it again.

Does Bleach Make Water 100-Percent Pure?

It's unfortunately a misconception that bleach will purify water completely.

Bleach won't kill some disease-causing organisms that are found in surface water, nor will it remove chemical pollutants from the water.

However, in an emergency, if adding bleach to the water is the only way to prevent dehydration and stay alive, then it's still a lot safer than drinking water without disinfecting it first.

What Happens If The Water You Want To Purify Is Very Cloudy?

If you've retrieved water for drinking that's very dirty and cloudy, it might not be enough to use bleach to purify it.

You will need to first filter the water. Now, since you might not have access to electricity, such as because there's a huge power outage, or you might not be able to make a fire, you might not be able to [boil the water](#) first.

A good way to [filter water](#) before bleaching it is to use a camping filter. Or, you could use a coffee filter. Here's how to filter water with a coffee filter prior to bleaching it.

1. Start by placing the water you want to filter in a large container.
2. Flatten a drip-coffee filter so that it's in a round shape.
3. Fold it once in half. Do that twice so you have a triangular shape.
4. Open one flap of the triangle and fit the filter into a funnel.
5. You should apply a few drops of water to the filter so that it will properly stick to the funnel.
6. Put the funnel into the mouth of an empty water bottle.
7. Carefully pour the dirty water from the large container into the bottle via the funnel.
8. The filter will collect impurities that are in the water, such as sand and dirt.
9. You'll find that as you continue pouring the water the filtration will slow down. This is because the filter will be getting full of dirt that's been removed from the water.
10. When you can see that the filter can't do its job anymore, you should replace it with a new, clean filter.
11. Once you have completed filtering all the water you need, you can then start the process of bleaching it.

Jim's Filter Method:

Get a tube sock and fill it with sand. Slowly pour water through it.

Purchase a bag of play sand from a hardware store. Cost: \$6 <https://www.homedepot.com/p/>

Related Questions

What are the dangers of putting too much bleach in water?

Too much bleach will irritate and harm your digestive system. However, too little won't be enough to kill bacteria that's in the water.

Index-4 Reducing Water Needs – Sanitary Shit.

If you stop flushing the toilet it will save a family of four the need for 7,500 gallons of water per month.

Then take a sponge bath every two or three days and save a lot more more. Now you are using 10 gallons per month per adult.

Next cut out clothes washing every day and by now you have a very small need for non-potable water.

Your life has now been guaranteed in regards to water problems. Congratulations.

40. Sanitary Shit. [Source](#)

SHIT

Shit happens, and it's going to continue to happen when shit happens. The question is what are we going to do about it? We have all heard the stories of people in high rises unable to get rid of their shit. When that happens expect cholera, hepatitis and diphtheria in your neighborhood. So what's a mother to do?

If you are a city slicker you may get a double whammy: no water and no sewage. Then on top of that the people uphill or up from an underground lift station, will continue to use rainwater to flush with. But without electricity the lift stations will not function, distributing shit to about ten percent of the households, making them uninhabitable. To prevent this, all homes should have a \$4 four inch [sewer pipe](#) cap. If you discover you are a lucky recipient, just dig up the line, cut it and install the cap with a rock holding it in place.

If you have a water shortage however, you still have a shit problem so now we have two problems in one. So let's solve them as one. First make a **composting toilet with \$25** in materials or for free using a toilet seat, a closet door and its two hinges, plus a five gallon pail. It will take a family of four a week to fill two buckets. Cover your daily deposit with dirt, sawdust, shredded paper, compost or grass using just enough to hide the color. I swear, there is no odor.

You can also buy an **adult potty chair** at a thrift store for \$10 and place a 5 gallon bucket under it.

A normal family uses 15,000 gallons of water each month with half of that, 7,500 gallons, used to flush. The compost toilet requires only 4 gallons per month. We just solved half of your biggest survival problem – water!

Now let's use the **Human Manure Composting** method to dispose of it. We will eventually build a 4 cubic foot compost pile. Stake out a 4 foot by 4 foot location. Empty the bucket, making sure that it is slightly wet if you choose not to urinate in it for some reason. Try to build sides that allow air in (pallets). Dig a hole in the pile and empty the bucket then cover it with a few inches of dirt, grass or paper. Never turn this compost pile. About every six inches of level place a layer of straw or sticks to allow air into the pile. The idea is to let the shit cook and build up steam. It will completely cook down anything in it in two weeks.

Anything bio-degradable can go in that pile, including Pampers, bloody bandages, road kill, Tampons, etc. It will all cook down.

Continue to build the pile up to a height of four feet. When finished, let it age one year to kill the human pathogens. It is now ready as a fertilizer on your garden.

Get your neighbors to do this as well and you have just prevented the dreaded unsanitary diseases, no shit.

NO TOILET PAPER

Yes you can survive it.

Purchase a liquid bug sprayer, adjust the wand and you have a bidet. [Cost \\$15](#)
You may have to shorten the wand or heat it to bend it a little.

Or assign one wash-rag to each person. After several uses, wash it.

FEMININE PRODUCTS - [Washable](#)

BATHING

Hot Towel Method

1. Heat one half quart of water in a covered pot.
2. Check frequently. As water starts to steam and form small bubbles on bottom of pot, remove from fire.
3. Get a medium-sized hand towel, large kitchen towel, large clean shirt or whatever. Slowly and carefully immerse towel into pot. Move towel around slightly to allow capillary action of cloth wick up hot water.

If towel is completely saturated, use less water next time as a fully wet towel will be too hot to pick up, let alone wring out, and it will drip all over the place.

4. When towel is very hot but not too hot to handle, pick up towel and vigorously wash body.
5. Wipe your butt with toilet paper. Then using the towel, wash your face, arms torso, back, legs. Then wash your armpits, crotch and butt.

Bucket and Bench Method

1. Wet your rag in the bucket to wet the body.
2. Soap and wash.
3. Rinse with the remaining water in the bucket.

Navy Shower

1) Rinse quickly. 2) Turn off water. 3) Soap up and bathe. 4) Rinse quickly. 5) Get out.

BEDDING

Sun Drying

1. All sleeping bags, sheets and blankets should be taken outside, turned inside out, and shaken.
2. They should be hung on bushes, across something, or placed on a clothes line so that the sun and fresh air can clean them.
3. After several hours, remake bed.
4. This should keep down bed bugs and lice, as well as remove the extra dead skin caused from infrequent baths.

Index-5 Militia Oath of “Boom Shacka Lacka Lacka Boom.”

I attended a Prepper meeting in the neighboring town. Several people were concerned about how they can protect themselves from gangs that have migrated there driving up the murder rates. My only contribution was that when things get chaotic they will either be dead or gone.

Here is what must happen, step by step.

- 1) Recognize were are now in a global war for the survival of humanity. This negates all rules to conform to of civility. This is a fight to defend your family.
- 2) Legally to become a Militia (from old law) one simply declares himself a Militia. This means no registration, no Federal Employee Number, no county license to be applied for.
- 3) Once you become a Militia you are authorized to be non-concealed carry and have a long gun over your shoulder.
- 4) As a Militia you have the right to make a citizens arrest once you have identified yourself doing so as a Militia.
- 5) Now all that remains is to formally & legally form the Militia. Pay attention because this is the hard part:
 - a) Locate a few buddies willing.
 - b) Swear the oath by everyone putting their right hand in a circle, touching hands.

c) All say “Boom Shacka Lacka Lacka Boom.”

d) Then on the count of three, break touching hands and holler “Go 9Th Street Militia!”

6) Now you are legal. There was a meeting of the minds.

7) **Arrest Process:**

a) Have one person get behind them and fire a shot into the air, forcing them to turn to the rear. The shooter had best be behind protection, such as a car engine.

b) The rest of the gang hollers “Militia, drop your weapons as you are under citizens arrest.”

c) Anyone who fails to drop ‘em can now be shot using sighted-in long guns.

d) If mistakes are made, sorry about that – the fog of war you know.
